

Agentic AI Allocation

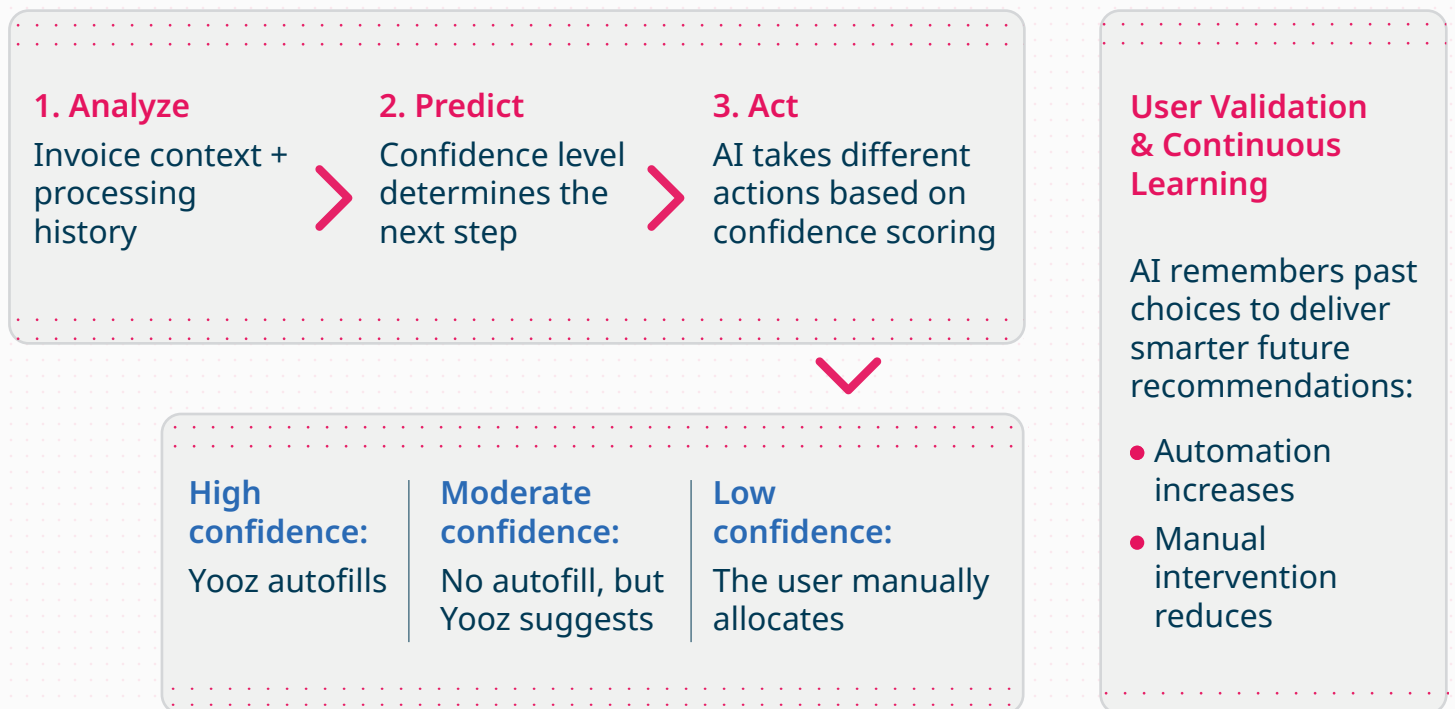

Stop Doing the Routine Work.
Focus on the Exceptions.

Why spend time making the same allocation decisions over and over?

Let AI handle routine invoice-line allocations so your AP team can focus on the decisions that require human judgment. Automate accounting, analytical, and budget allocations line by line.

Once the data is captured and extracted, Agentic AI will:

Where the real work happens.

Capturing the invoice is easy. Deciding how each line should be coded is what takes time. That's where Yooz applies intelligence so that you don't have to.

Why it matters

Process Faster

75% of AI autofill recommendations are accepted*

Reduce repetitive coding and allocation work with intelligent suggestions

Automate with Control

Know what happens and why

Review only the exceptions that require attention

Adapt to Complexity

Go beyond exact matches

Find relevant allocations for more complex scenarios

**based on actual Yooz customer results*

Automation you can see and trust

See AI in action

Know when Yooz automatically applies or recommends a value.

Context matters

Recommendations consider invoice meaning, processing history, and organizational context, beyond exact matches.

More automation. Same visibility and control.

Yooz extends intelligence to the line level where invoices are matched, coded, reconciled and allocated. This helps finance teams automate more of every invoice.

Ready to automate more of every invoice?
