

YoozAttachments

Stop Approving Without Context

Give every approver the full story behind every transaction, instantly.

Even with automation in place, finance teams are still making decisions without the full picture.

- Supporting documents are spread across emails, shared drives, and vendor portals
- Approvers lack the context needed to validate transactions
- Finance teams waste time chasing information instead of processing

Lack of visibility results in:

Delayed approvals

Manual follow-ups

Increased audit risk

Automation moves invoices. Context moves decisions.

YoozAttachments brings supporting documentation directly to your financial workflows, ensuring every transaction is complete, validated, and audit ready.

Attach documents to Purchase Requests, POs, and invoices

Include any file type - (quotes, contracts, photos, receipts, etc.)

Access all supporting information at the point of approval

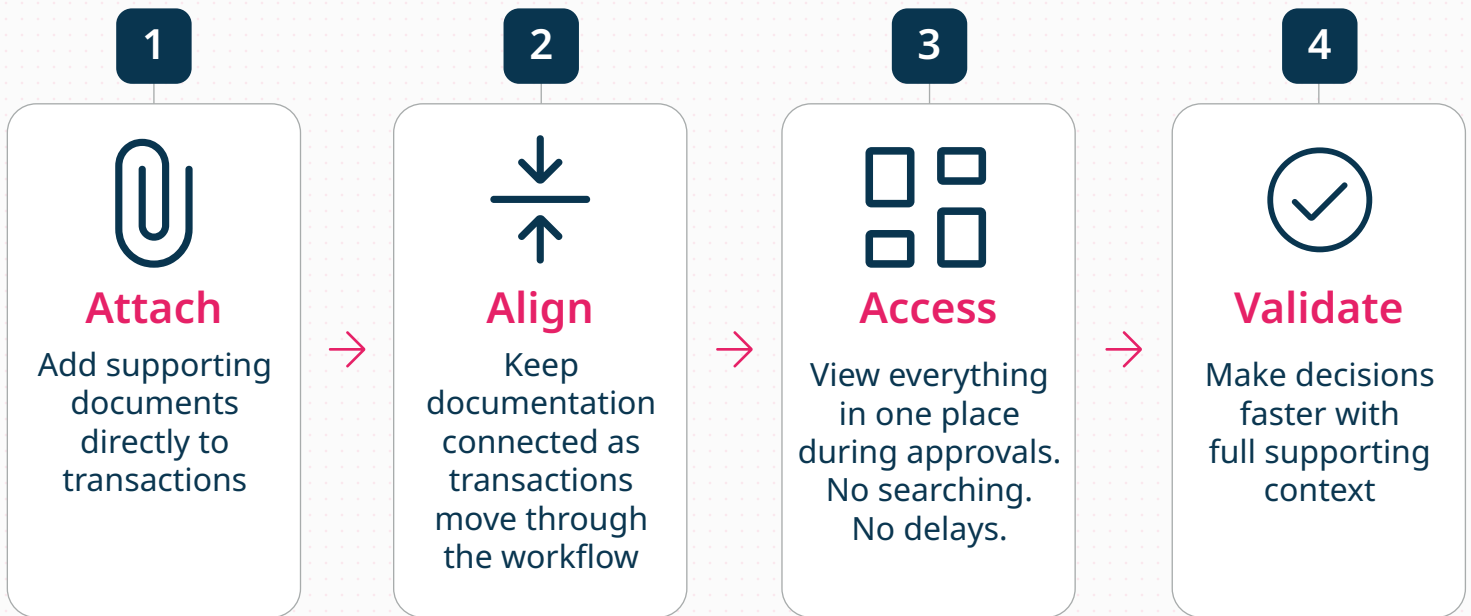

Maintain a complete and centralized audit trail across the entire workflow

"The approval workflow is probably my favorite part of Yooz, because it takes the guesswork out of where the invoice is supposed to go next. Yooz just takes care of it and I don't have to think about it."

Reanna Bradford,
CFO of Livermore Valley Performing Arts

How it Works in Yooz

Built for Real-World Operations

In industries where financial decisions depend on documentation, YoozAttachments ensures every transaction is backed by real-world context.

Trucking & Logistics	Attach repair documentation, fuel receipts, and field photos
Construction	Attach contracts, approvals, and jobsite documentation
Manufacturing	Attach specs, delivery confirmations, and QC documentation
Automotive	Attach service records, quotes, and supporting documentation

The Impact

Faster Approvals

Everything needed is available upfront

Better Decisions

Approvers act with full context

Audit-Ready

Every transaction includes its supporting documentation

Connected Workflows

Link upstream and downstream processes

YoozAttachments transforms your financial workflow into the most powerful decision-ready system, not just a processing engine.
