

Yooz Budget Management

Stop Budget Surprises
Before They Happen

Give finance teams real-time control over spending, commitments, and budget performance.

Even with automated purchasing and invoice workflows, many organizations still manage budgets after the fact.

Yooz Budget Management brings real-time budget visibility directly into the purchasing process, helping finance teams make proactive decisions before money is committed.

Without real-time budget visibility:

- Budget utilization is tracked across disconnected spreadsheets and systems
- Approvers lack visibility into available funds before approving purchases
- Finance teams identify overspending too late to prevent it

Lack of budget visibility results in:

Approval delays

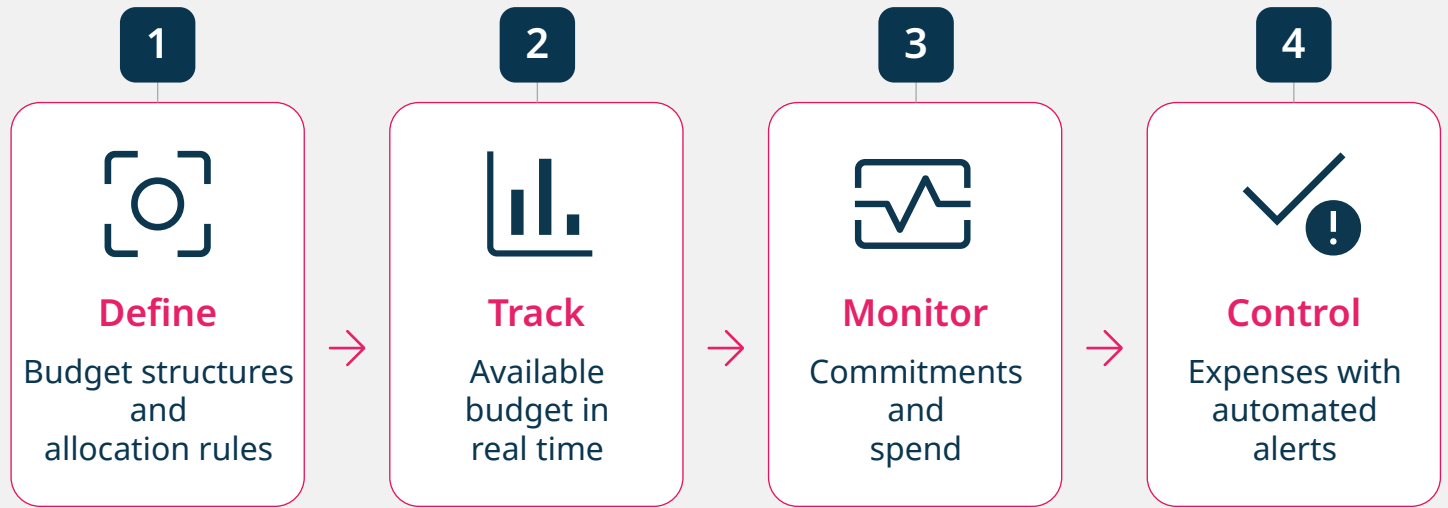

Poor finance visibility

Overspending risk

Financial control starts before spending happens.

Yooz Budget Management is seamlessly integrated into your financial operations workflows, giving organizations complete visibility into committed, invoiced, and available budget amounts throughout the entire purchase-to-pay process.

How it Works in Yooz

The impact of full, end-to-end transparency

Faster Approvals

Real-time budget availability is visible before approvals

Spending Control

Prevent budget overruns with automated alerts and governance

Better Decisions

Budget owners act with current financial information

Financial Transparency

Gain visibility into all committed invoiced, and available funds

Yooz Budget Management transforms budgeting from a month-end reporting exercise into a proactive financial control system.
